Fundamental Concepts of Python Programming

Before diving into data structures, it's essential to grasp core programming concepts in Python.

Variables and Data Types

Python supports various data types, including:

- **Numeric Types:** int, float, complex
- **Sequence Types:** list, tuple, range
- **Text Type:** str
- **Mapping Type:** dict
- **Set Types:** set, frozenset

Variables are dynamically typed, meaning you don't need to declare their types explicitly.

```
x = 10 Integer
name = "Alice" String
pi = 3.1415 Float
is_active = True Boolean
```

Control Structures and Functions

Control flow constructs like `if`, `for`, and `while` facilitate decision-making and iteration.
