Sample Evolution Regents Question Walkthrough

Let's walk through an example to illustrate how to approach an evolution question:

Question:

A scientist observes that a population of beetles in a forest has a variation in shell color—some are green, others are brown. After a storm causes a significant increase in bird predation, the researcher notes that the proportion of green beetles decreases over time. Which of the following best explains this change?

A) Green beetles are better camouflaged, leading to increased survival.

- B) Brown beetles are more likely to be eaten by predators.
- C) Green beetles are more likely to survive and reproduce.
- D) Brown beetles have a higher mutation rate.

Approach:

1. Recognize that the question involves changes in population proportions due to environmental pressures—here, predation.
2. Recall that natural selection favors traits that increase survival.
3. The decrease in green beetles suggests they are less camouflaged or more visible to predators.

Answer:

B) Brown beetles are more likely to be eaten by predators, leading to a decrease in green beetles.
