Sample POGIL Activities and Their Answers for Mole Ratios

Below are some common POGIL activity questions related to mole ratios, along with detailed answers to facilitate understanding.

Question 1: What is a mole ratio, and why is it important in chemical reactions?

Answer: A mole ratio is a conversion factor derived from the coefficients of a balanced chemical equation, indicating the relative number of moles of reactants and products involved. It is important because it allows chemists to calculate the amounts of substances needed or produced in a reaction, ensuring stoichiometric accuracy. For example, in the combustion of methane: $\text{CH}_4 + 2 \text{O}_2 \rightarrow \text{CO}_2 + 2 \text{H}_2\text{O}$ The mole ratio of methane to oxygen is 1:2, meaning 1 mole of methane reacts with 2 moles of oxygen.

Question 2: Given the balanced equation: $\text{N}_2 + 3 \text{H}_2 \rightarrow 2 \text{NH}_3$ If 4 moles of nitrogen gas are available, how many moles of ammonia can be produced?

Answer: From the balanced equation, the mole ratio of N_2 to NH_3 is 1:2. Using this ratio: $\text{Moles of NH}_3 = 4 \text{ moles N}_2 \times \frac{2 \text{ moles NH}_3}{1 \text{ mole N}_2} = 8 \text{ moles NH}_3$ Therefore, 8 moles of ammonia can be produced from 4 moles of nitrogen gas.

Question 3: If 5 moles of hydrogen gas are used in the reaction, how many moles of nitrogen

gas are needed?

Answer: The balanced equation shows the mole ratio of H₂ to N₂ is 3:1. Rearranged: $\text{Moles of N}_2 = 5 \text{ moles H}_2 \times \frac{1 \text{ mole N}_2}{3 \text{ moles H}_2} = \frac{5}{3} \approx 1.67 \text{ moles N}_2$ Thus, approximately 1.67 moles of nitrogen gas are required.

Question 4: How do you determine the mole ratio from a balanced chemical equation?

Answer: To determine the mole ratio:

1. Balance the chemical equation so that the number of atoms for each element is equal on both sides.
2. Identify the coefficients of the substances involved.
3. Express the ratio of the coefficients; this ratio indicates the number of moles of one substance relative to another.
4. Use these ratios as conversion factors in calculations involving quantities of reactants or products.

Typical Questions and Answers in Mole Ratio Pogil Activities

Sample Question 1

Given the balanced chemical equation:

What is the mole ratio of methane to oxygen?

Answer

The mole ratio of methane to oxygen is 1:2, meaning one mole of methane reacts with two moles of oxygen.

Sample Question 2

If 3 moles of methane are burned, how many moles of water are produced?

Answer

Since the balanced equation shows 1 mole of methane produces 2 moles of water, 3 moles of methane will produce:

$$3 \text{ moles CH}_4 \times (2 \text{ moles H}_2\text{O} / 1 \text{ mole CH}_4) = 6 \text{ moles H}_2\text{O}$$

Sample Question 3

During a reaction, 5 moles of oxygen are available. How many moles of methane are required for complete combustion?

Answer

From the equation, the ratio of methane to oxygen is 1:2, so:

$$x \text{ moles CH}_4 \times (2 \text{ moles O}_2 / 1 \text{ mole CH}_4) = 5 \text{ moles O}_2$$

$$x = 5 / 2 = 2.5 \text{ moles CH}_4$$

Thus, 2.5 moles of methane are needed.
