Question 1: Multiple Choice

Which method would you use to separate salt from saltwater?

1. a) Filtration
2. b) Evaporation
3. c) Magnetic separation
4. d) Decantation

Answer: b) Evaporation

Question 2: True or False

Magnetic separation can be used to separate iron filings from sand.

Answer: True

Question 3: Short Answer

Describe the process of distillation and give an example of a mixture that can be separated using this technique.

Answer: Distillation involves heating a liquid mixture to its boiling point, vaporizing the component with the lower boiling point, and then condensing the vapor back into a liquid to collect it separately. An example is separating alcohol from a mixture of alcohol and water.

Question 4: Practical Application

You have a mixture of sand, salt, and water. Describe step-by-step how you would separate each component.

Answer: First, use filtration to separate the sand from the saltwater solution. Then, evaporate the saltwater by heating it until all the water evaporates, leaving the salt behind. The sand remains separated at each step.
