Sample Questions and Answers from HASPI Medical Anatomy and Physiology 13c

Below are representative sample questions that students might encounter, along with concise explanations inspired by typical 13c answers.

Question 1: Describe the structure and function of the neuron.

Answer: A neuron is a specialized nerve cell composed of three main parts: the cell body (soma), dendrites, and an axon. The dendrites receive electrical signals from other neurons, while the axon transmits impulses away from the cell body

toward other neurons or effectors. Neurons are responsible for transmitting electrical signals throughout the nervous system, facilitating communication between the brain, spinal cord, and body tissues.

Question 2: Explain the process of muscle contraction.

Answer: Muscle contraction involves the sliding filament theory, where actin and myosin filaments within muscle fibers slide past each other. When a muscle cell receives a nerve impulse, calcium ions are released, allowing myosin heads to attach to actin and perform a power stroke. This process shortens the muscle fiber, producing contraction. ATP provides the energy necessary for this cycle to continue.

Question 3: Identify the major parts of the heart and their functions.

Answer: The heart has four chambers: two atria and two ventricles. The right atrium receives deoxygenated blood from the body, pumping it into the right ventricle, which sends it to the lungs for oxygenation. The left atrium receives oxygen-rich blood from the lungs, transferring it to the left ventricle, which then pumps it through the aorta to the rest of the body. Valves prevent backflow, ensuring unidirectional blood flow.

Strategies for Students to Maximize Learning with 13c Answers

1. Active Recall and Practice

Instead of passively reviewing answers, attempt to recall information before checking the solutions. This enhances memory retention.

2. Create Concept Maps

Visual diagrams linking concepts help in understanding relationships within systems like the circulatory or nervous system.
