Sample Pathology MCQs with Answers

To illustrate the utility of pathology MCQs, here are some representative examples across different categories:

1. Basic Science MCQ

Question: A 65-year-old male with a history of hypertension presents with a recent stroke. Histological examination of his brain shows hyaline arteriosclerosis. Which of the following best describes this vascular change? A) Lipid accumulation in arterial walls B) Thickening of the vessel wall with homogeneous eosinophilic material C) Calcification of the arterial media D) Fragmentation of elastic fibers Answer: B) Thickening of the vessel wall with homogeneous eosinophilic material Explanation: Hyaline arteriosclerosis is characterized by the deposition of hyaline material in the walls of small arteries and arterioles, leading to thickening and narrowed lumens, commonly seen in hypertensive or diabetic patients. This change appears as homogeneous, eosinophilic, glassy material under microscopy.
