Key Concepts and Knowledge Checks

Below are some critical topics often tested in RN Maternal Newborn Online Practice 2019 A, along with sample questions to illustrate their application:

Fetal Monitoring and Interpretation

Key Points:

1. Understanding fetal heart rate patterns
2. Recognizing signs of fetal distress
3. Differentiating between accelerations and decelerations

Sample Question:

A fetus exhibits late decelerations on the external monitor. What is the priority nursing intervention?

- A) Reposition the mother to relieve pressure
- B) Increase IV fluids
- C) Turn the client to the left side
- D) Notify the healthcare provider immediately

Correct Answer: D) Notify the healthcare provider immediately

Rationale: Late decelerations indicate uteroplacental insufficiency, which can lead to fetal hypoxia. Immediate notification is necessary to implement further interventions.

Postpartum Hemorrhage Management

Key Points:

1. Recognize early signs (e.g., heavy bleeding, boggy uterus)
2. Know initial interventions (fundal massage, fluid replacement)
3. Understand when to administer medications (e.g., oxytocin)

Sample Question:

A postpartum client has a boggy uterus that is not firm after massage. The bleeding is heavy. What is the next best step?

- A) Administer pain medication
- B) Perform fundal massage again and assess for retained clots
- C) Encourage ambulation to improve uterine tone
- D) Send the client for an ultrasound immediately

Correct Answer: B) Perform fundal massage again and assess for retained clots

Rationale: A boggy uterus indicates uterine atony; massage is the first intervention. Persistent bleeding may require additional measures or medications.

Neonatal Care and Assessment

Key Points:

1. APGAR scoring at 1 and 5 minutes
2. Recognizing signs of respiratory distress
3. Promoting parent-infant bonding

Sample Question:
