Sample Practice Questions and Solutions

Question 1: Similar Triangles

Given two triangles, Triangle ABC and Triangle DEF, with angles A and D equal, and sides AB and DE proportional, determine whether the triangles are similar.

Solution:

- Check for at least two pairs of equal angles (AA criterion). - If angles A and D are equal, and sides AB and DE

are proportional, then verify if the other angles are equal or if the third sides are proportional. - If two angles are equal and sides surrounding them are proportional, then by SAS similarity, the triangles are similar.

Question 2: Applying Scale Factors

A triangle has sides measuring 6 cm, 8 cm, and 10 cm. A similar triangle has corresponding sides measuring 9 cm, 12 cm, and 15 cm. Find the scale factor and verify if the triangles are similar.

Solution:

- Calculate the scale factor using corresponding sides: - $9/6 = 1.5$ - $12/8 = 1.5$ - $15/10 = 1.5$ - Since all ratios are equal, the scale factor is 1.5. - The triangles are similar because their sides are proportional with a consistent scale factor.

Question 3: Transformations

A triangle is translated 4 units right and 3 units down. Afterward, it is rotated 90° clockwise about point P. Describe the final position of the triangle.

Solution:

- First, perform the translation: move all vertices 4 units right and 3 units down. - Then, rotate each vertex 90° clockwise around point P: - Use rotation formulas or graphing methods. - The overall effect is a combination of translation and rotation, resulting in the triangle's new position.
