Sample Questions and Corresponding Answer Key Insights

Below are typical questions from the PhET solubility lab exercises, with guidance on how to interpret the answer key:

Q1. What happens to the solubility of salt as temperature increases?

Answer Key Insight:

Most salts exhibit increased solubility with rising temperature. The answer key will show that, for example, sodium chloride's solubility increases slightly with temperature, which aligns with the general trend observed in solubility curves.

Q2. How does the solubility of sugar change with temperature?
