Core Concepts in Painless Algebra

Variables and Expressions

Variables are symbols that represent unknown or changing values. Examples: $-x + 3$ $-2y - 5$ Expressions are combinations of variables, numbers, and operations.

Solving Simple Equations

The main goal is to isolate the variable. Steps: 1. Simplify both sides of the equation. 2. Use inverse operations to move terms across the equation. 3. Perform the same operation on both sides to maintain equality. Example: Solve for x : $2x + 4 = 12$ - Subtract 4 from both sides: $2x = 8$ - Divide both sides by 2: $x = 4$

Understanding and Using Properties of Algebra

Properties make solving problems more straightforward: - Commutative Property: $a + b = b + a$; $a \times b = b \times a$ - Associative Property: $(a + b) + c = a + (b + c)$; $(a \times b) \times c = a \times (b \times c)$ - Distributive Property: $a(b + c) = ab + ac$

Working with Inequalities

Inequalities are equations with symbols like $<$, $>$, $\leq$, $\geq$. Tip: When multiplying or dividing both sides by a negative number, reverse the inequality sign. Advanced Topics Made Simple

Solving Systems of Equations

Systems involve finding values that satisfy multiple equations simultaneously. Methods: - Substitution - Elimination - Graphical solution Example: Solve: $x + y = 10$ $x - y = 2$ Solution: - Add equations: $(x + y) + (x - y) = 10 + 2 \rightarrow 2x = 12 \rightarrow x = 6$ - Substitute x into the first equation: $6 + y = 10 \rightarrow y = 4$

Quadratic Equations

Quadratic equations are of the form $ax^2 + bx + c = 0$. Methods: - Factoring - Completing the square - Quadratic formula Painless tip: Memorize the quadratic formula for quick solutions.
