Core Microeconomic Concepts

Microeconomics focuses on individual markets and consumers. Mastery of these concepts is essential for understanding how markets operate and how prices are determined.

Demand and Supply

- Demand: The quantity of a good or service consumers are willing and able to buy at various prices over a period. - Law of Demand: As price increases, demand decreases (ceteris paribus). - Supply: The quantity of a good or service producers are willing and able to sell at various prices. - Law of Supply: As price increases, supply increases. - Market Equilibrium: The point where demand equals supply; the market clears.

Determinants of Demand and Supply

- Demand Determinants: - Price of the good - Consumer income - Prices of related goods (substitutes and complements) - Consumer tastes and preferences - Expectations of future prices - Population size - Supply Determinants: - Cost of production - Technology - Prices of related goods - Producer expectations - Number of sellers

Price Elasticity of Demand (PED)

- Measures responsiveness of quantity demanded to price changes. - Elastic Demand: $PED > 1$ (e.g., luxury goods) - Inelastic Demand: $PED < 1$ (e.g., essential medicines) - Unit Elastic: $PED = 1$ - Significance in business pricing strategies and tax policies.

Price Elasticity of Supply (PES)

- Responsiveness of quantity supplied to price changes. - Factors affecting PES: - Spare capacity - Ease of switching resources - Time period

Market Failure and Government Intervention

- Causes of market failure: - Externalities (positive and negative) - Public goods - Information gaps - Monopolies - Government policies: - Taxes and subsidies - Regulation - Provision of public goods - Price controls

Macroeconomic Principles

Inflation

- Sustained rise in the general price level. - Types: - Demand-pull inflation - Cost-push inflation - Effects: - Erodes purchasing power - Can lead to wage-price spirals - Measuring inflation: Consumer Price Index (CPI)

Balance of Payments (BOP)
