Understanding Estimation and Costing in Civil Engineering

Estimation and costing are fundamental processes in civil engineering that involve predicting the expenses associated with construction projects. Proper estimation ensures that the project is financially viable and that resources are allocated efficiently.

What is Estimation?

Estimation refers to predicting the approximate cost of a project based on preliminary data. It involves calculating quantities of materials, labor, and equipment required for the project, along with their associated costs. Estimation is usually performed during the initial planning stages when detailed drawings may not yet be available.

What is Costing?

Costing involves determining the actual expenses incurred during the execution of the project. It includes detailed calculations based on the final project plans, specifications, and actual quantities of work completed. Costing helps in financial control and project evaluation.
