Overview of Work and Energy in Physics

Before delving into the specifics of workbook answers, it's important to understand the core concepts covered in Unit 4. Work and energy are fundamental ideas in physics that explain how objects move and interact.

What is Work?

Work is done when a force is applied to an object, causing displacement in the direction of the force. The mathematical expression for work is: - Work (W) = Force (F) $\times$ Displacement (d) $\times \cos\theta$ where θ is the angle between force and displacement vectors. Key points: - Work is only done when there is displacement. - If the force is perpendicular to displacement, no work is done. - Work is measured in joules (J).

What is Energy?

Energy is the capacity to do work. It exists in various forms, including kinetic energy, potential energy, thermal energy, and more. The primary focus in this unit is on kinetic and potential energy. Types of energy: - Kinetic Energy (KE): Energy possessed by a moving object. - Potential Energy (PE): Stored energy due to position or configuration.
