3. For stubborn deposits: descaling agents or specialized cleaners

Allow the cleaning solution to sit for the recommended duration to effectively break down residues.

4. Scrubbing and Brushing

Use brushes or scrubbers to thoroughly clean the interior surfaces. Pay attention to corners and seams where dirt can accumulate.

5. High-Pressure Washing

Use a high-pressure hose to rinse the tank thoroughly, removing all cleaning agents and dislodged debris.

6. Disinfection

Apply a disinfectant suitable for your tank type, ensuring all surfaces are sanitized. Follow manufacturer instructions for dwell time.

7. Final Rinse and Inspection

Perform a final rinse with clean water to remove any residual disinfectant. Visually inspect the tank for cleanliness and damage.

8. Drying and Reassembly

Allow the tank to dry completely before refilling. Use fans or ventilation if necessary to expedite drying.

Special Considerations for Different Tank Materials

Plastic Tanks

- Use gentle cleaning agents to avoid damage. - Avoid abrasive tools that can scratch the surface.
