Logical Fallacies Exercises

Exercise 1: Identifying Fallacies in Arguments

Read each statement carefully. Determine whether it contains a logical fallacy. If it does, identify the type of fallacy. 1. "My opponent argues that we should increase taxes, but he's just a rich person trying to protect his wealth." 4. "If we allow students to redo their exams, next they'll want to retake every test until they get a perfect score." 5. "The new policy is effective because many people believe it's the right thing to do." 6. "I saw a person from that country commit a crime, so all people from that country must be criminals." 7. "We should not listen to his argument about health benefits because he's not a doctor." 8. "Either we accept the new law or chaos will ensue." 9. "My neighbor says that eating carrots improves eyesight, so it must be true." 10. "You can't trust her opinion on education because she's never been to college."

Fallacy: False Dilemma Explanation: Suggests only two options—accept or chaos—ignoring middle ground. 9. Fallacy: Appeal to Authority (or Anecdotal) Explanation: Accepts a claim based solely on personal testimonial, not scientific evidence. 10. Fallacy: Ad Hominem Explanation: Dismisses her opinion based on her educational background rather than her argument.
